Compelling reasons for ESET Small Business Security

Parental Control

Data protection and terms of use

The Parental Control feature is not included in ESET Small Business Security because it would violate legal data protection obligations towards employees. In general, the use of home user solutions in a commercial context is not permitted.

Identity Protection

Identity Protection

The Identity Protection feature is not included in ESET Small Business Security. It was developed to protect the identity and personal data of a natural person from misuse and not of entire companies.

Security solution for servers (ESET Safe Server)

Server solution

Compared to home user solutions, ESET Small Business Security offers a security solution for servers. It supports all general and file servers with Windows operating systems.

System requirements

⊕ Advantages compared to ESET PROTECT Business Bundles

Costs and administration

The security features of ESET Small Business Security have been specially designed for small businesses. This also makes it easier to implement compliance and data protection. At the same time, the costs and administrative effort are much lower compared to ESET business solutions.
